(54) DRIVING METHOD FOR LIQUID CRYSTAL DISPLAY DEVICE

(57) Abstract:

PROBLEM TO BE SOLVED: To provide a driving method for a liquid crystal display device by which motion blur is prevented from occurring without causing increase in a circuit scale and decrease in a panel opening ratio.

SOLUTION: This is a driving method for a liquid crystal display device, in which plural scanning lines 2 and plural signal lines 3 are arranged in a grid shape; one of the scanning lines 2 is selected at a moment; and varies the state of a liquid crystal via the signal lines 3 and thereby displays an image according to image data, and an image data selection period t_1 set to a time shorter than a time necessary for scanning one of the scanning lines 2 and a 'black' display selection period t_2 are set; the image is displayed according to the image data via the scanning lines 3 during the image selection period t_1 ; and a monochrome image is displayed via the signal lines 3 during the 'black' display period t_2 .
